

# How to get an OpenAI API key?

You can get an OpenAI API key by signing up on the OpenAI website and creating an account.

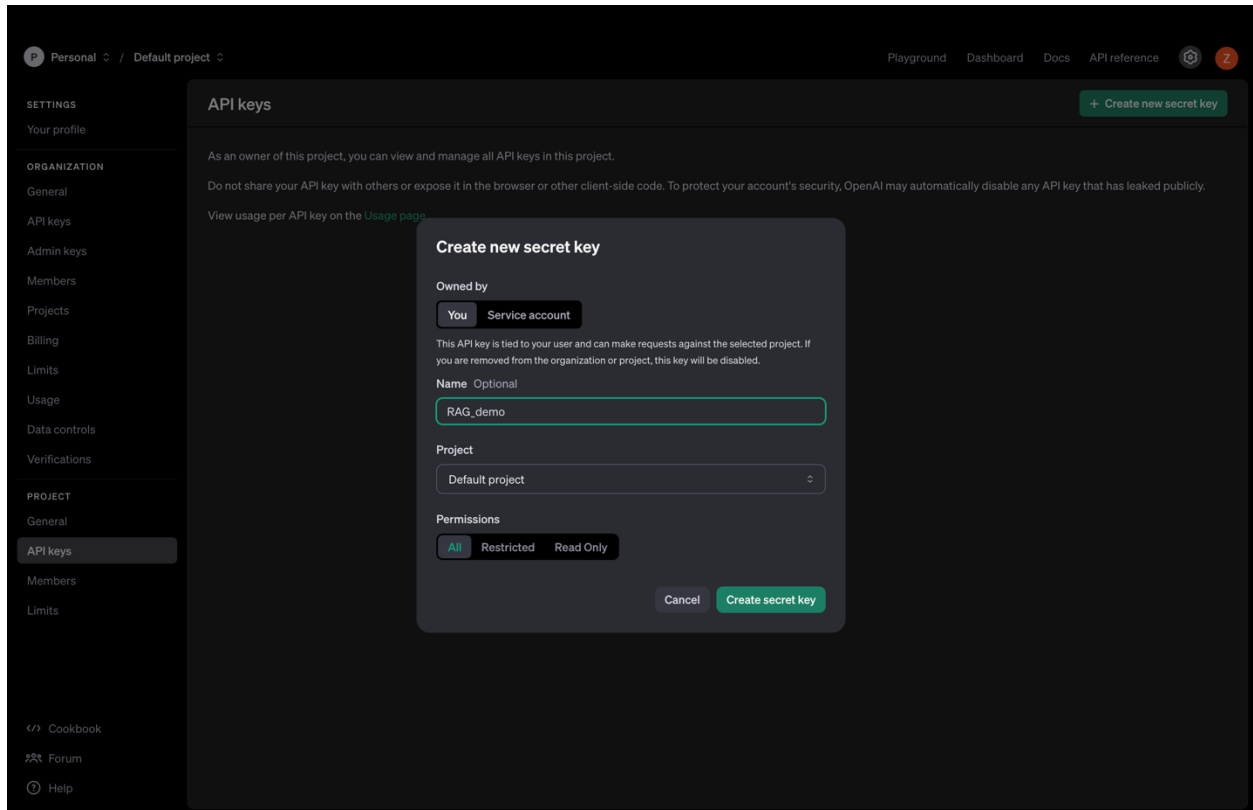

Follow this link to get an OpenAI API key: <https://platform.openai.com/api-keys>

Once you create your account (any email ID works), you will see the following screen:

If this screen is not visible, then click on the settings  icon on the top right corner of the screen. And then go to the 'API keys' section as shown on the left panel.

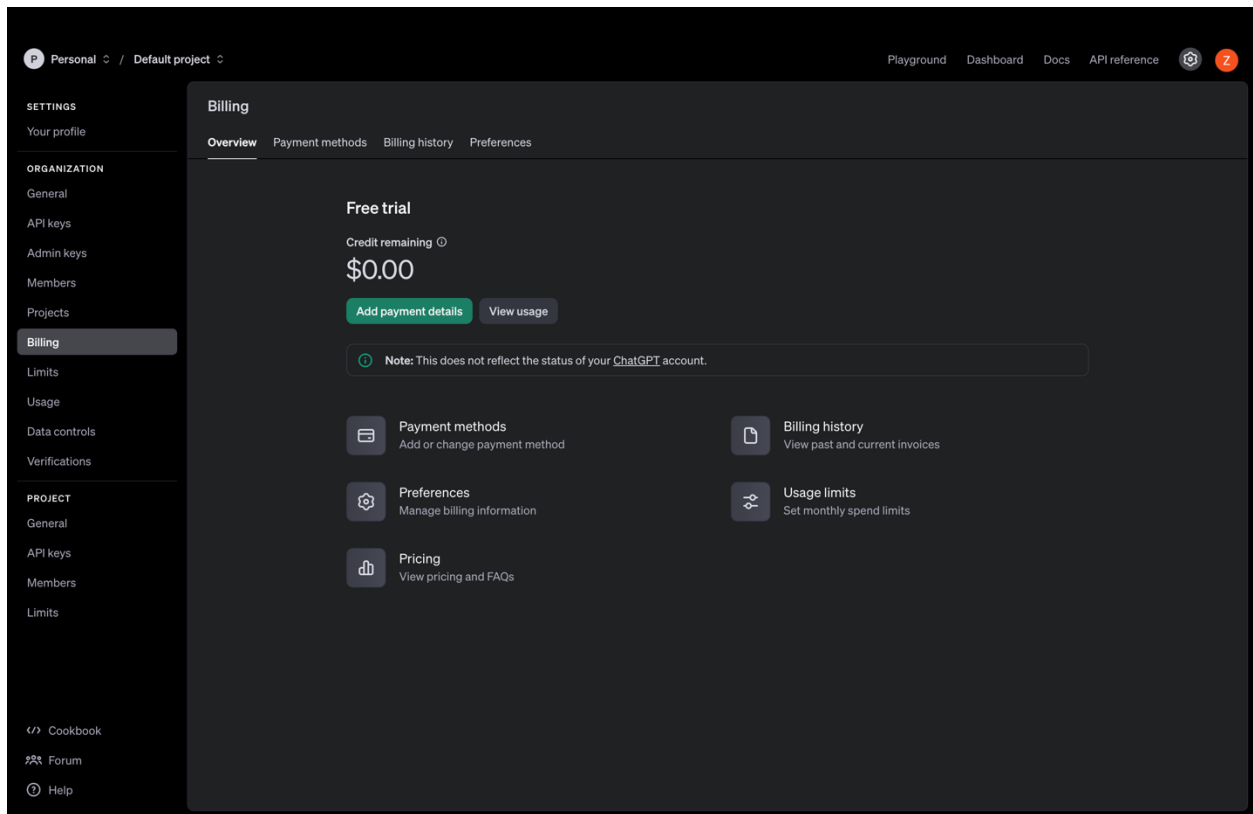

Click on the "Create new secret key" button (top right corner or the center one) to create a new API key.

Once you fill in the details and click on "Create secret key", you will see the API key in the following screen which you can copy and use in the code. **Make sure to save it in a safe place as you won't be able to see it later.**

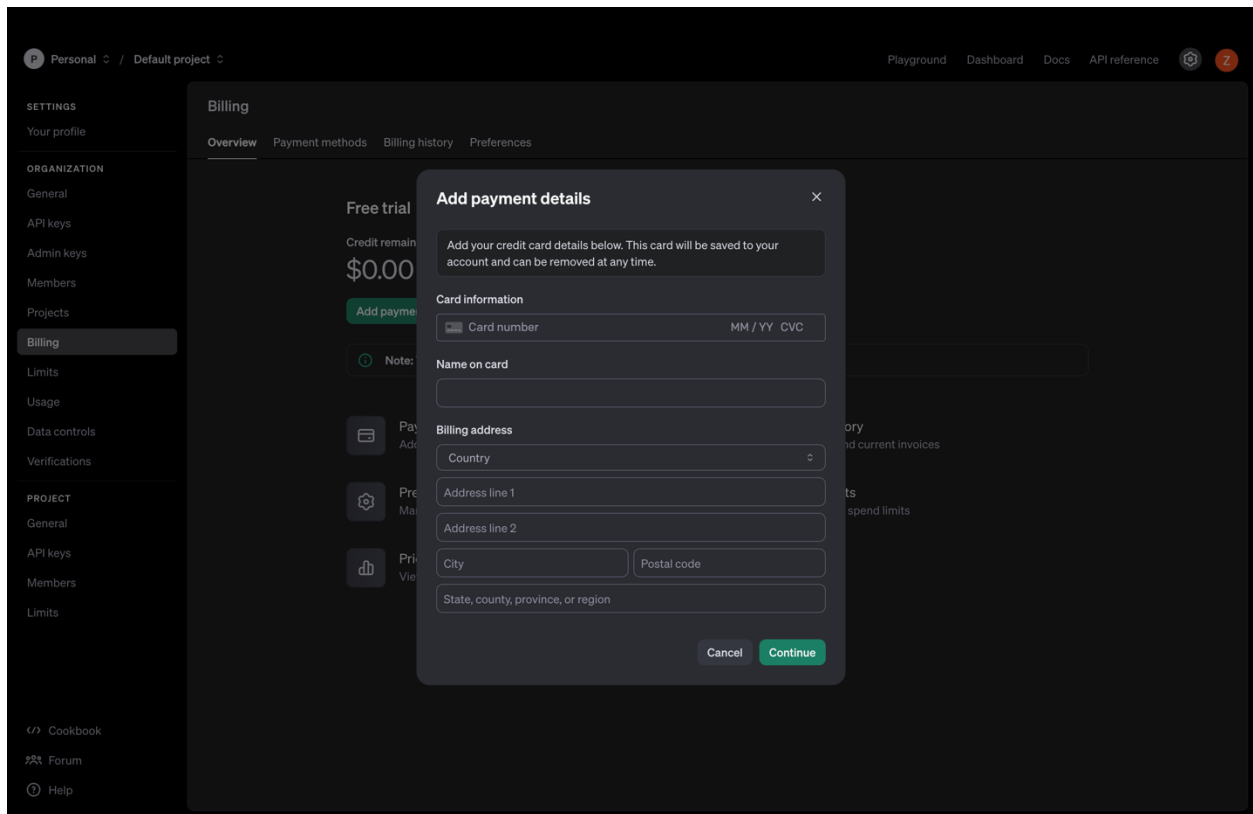

But this API key **won't work** unless you put your credit card details on the Billing section as shown in the following screenshot:

So now go to the 'Billing' section from the left panel. The following screen should be visible.

Click on 'Add Payment Details' and add your card details. Click on 'Individual' option.

Then fill in the details as shown below and click on 'Continue'.

It will ask you to set a 'Initial Credit Purchase'. Since the minimum is \$5, you can set it to \$5. You won't need more than that for initial runs!

Now you are all set to run the code!
